Template Version: 1.0.0

Ansur Components Used

Ansur Version 3.1.4

Plug-In: ESA612 Version 1.1.3

Test Setup

Selections

Service Events Performed	Standards Performed
	IEC 60601

Device under test

Serial Number	TV01/111508	Type	Trilogy
Appliance Code	1040000	Model	202
Group	Ventilador	Location	Andover Alianza Medica S. A.
Status	Reparado	Address 1	Salar de Huasco 795, Pudahuel
Manufacturer	Philips Respironics	Address 2	Laboratorio

MTI Data

Test Instrument	Serial Number	Firmware Version
ESA612B	6034120	v3.01

Test Result

IEC 60601-1 - CL2 Procedure: (1) Connect the DUT to the ESA612 as indicated in the operators manual. (2) Ensure that DUT power is On. (3) Click module setup and specify the patient leads that are to be tested. (4) Connect patient leads as indicated to the right. (5) Click Start Test to perform the safety test. Configuration: Polarity Switching Delay:3(s) Mains Voltage Live to Neutral Result: Value Unit High Limit Low Limit Value Unit High Limit Low Limit Configuration: Unused Applied Parts:Floating Normal Condition Result: Normal Condition Result: Open Neutral Result: Value Unit High Limit Low Limit Unit High Limit Low Limit Stan Normal Condition Result: Normal Condition Result: Open Neutral Result: Value Unit High Limit Low Limit Unit Low Limit Stan Normal Condition Result: Open Neutral Result: Open Neutral Result: Open Neutral Result: Open Neutral Open Neutr
